Land-based salmon farming waiting for its big break

Elisabeth Fischer Intrafish.com April 4, 2013

“The views on land-based salmon farming are ambivalent, but the call for a move onshore seems to be growing louder every day. Up to a dozen new farms are currently in various planning or construction stages all around the world, in addition to the four that have already been stocked with smolts. And the industry interest is “tremendous” and growing, Steven Summerfelt, director, aquaculture systems research at the Conservation Fund Freshwater Institute, one of the major research institutes into on-land recirculation systems for salmon, told Intrafish. (Article pdf courtesy of Intrafish.com [Land-based salmon farming waiting for its big break -First in Seafood News – Intrafish](#))”
